APPENDIX B

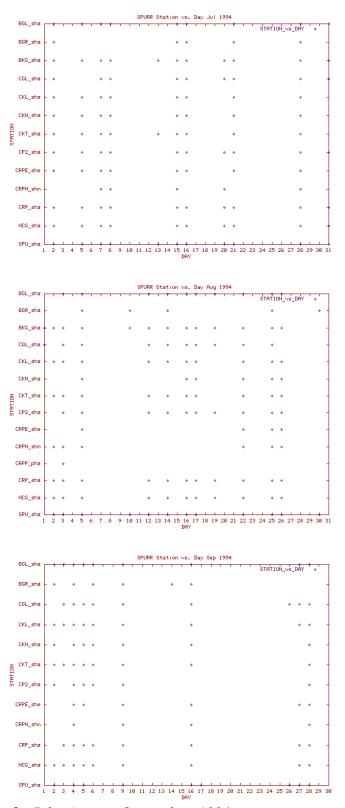

This appendix contains monthly plots showing station usage per day for each station in each sub-network operated by AVO. Appendix B is 180 pages long. The presence of a dot indicates the station was used to locate at least 1 earthquake by the AVO on the indicated date. These plots provide a measure of both a station's operational health, and earthquake frequency near a given volcano. It is noted that an absence of seismicity at a given network might imply either a station outage or a lack of seismicity. The contents are expressed by year and subnet. An absence of data for a given month implies that no earthquakes were measured at that sub-network during that period. Plots are organized by network going from east (Mount Spurr) to west (Kanaga).
